Position applied for: Business Analyst

SUMMARY

Bachelor's degree in Information Technology/Information Systems with a solid foundation in data analysis, database design, and business process automation (ERP). Possessing sharp systems thinking, requirement elicitation skills, and process modeling (BPMN, UML). Desire to contribute the ability to effectively bridge the gap between the business and technical teams to optimize software products at the company.

SKILLS

Business Analysis (BA Core): Requirement gathering and management (BRD, SRS, Use Case), Business process analysis (BPMN, As-Is / To-Be).
Tools: Jira, Draw.io, Postman.
Technical: SQL, Data analysis with Python/Excel, Understanding of software development processes (Agile/Scrum).

PROJECT & EXPERIENCE

Project: Developing a machine learning model to detect real-time fraud in online transactions.
Role: Business Analyst
Contributions:
Data processing & Feature analysis: Collecting, cleaning, and analyzing historical transaction datasets; building and selecting important features to help the model accurately classify unusual transactions.
Model performance evaluation: Establish technical evaluation metrics (such as Precision, Recall, F1-Score, ROC-AUC) to measure the accuracy of the machine learning model and minimize the false positive rate.

EDUCATION

School: Duy Tan University
Major: Management Information Systems GPA: 3.5/4.0
Graduation year:

CERTIFICATES & ACTIVITIES

Certificate Project Management: Completed the Google Project Management Certificate professional development program. Focus on project planning, Work Breakdown Structure (WBS), risk management, and stakeholder management.
Certificate TOEIC:
